

FOR IMMEDIATE RELEASE:

Linkonlearning Realigns Testing Technology

Testing helps retention and aids self-monitoring

LAKE HAVASU CITY, Arizona (March 2004)—Frequent testing not only helps students retain more content; it reduces test anxiety and helps students monitor their own progress.

With this in mind, Linkonlearning recently realigned its testing technology to incorporate a redo methodology as well as integrated 11 new types of questions into its existing K-8 content. The end result is that testing is faster, effective and engaging.

As a result of extensive scientific research and development, Linkonlearning developed its unique redo technology that makes learning fun and testing non-threatening. As students progress through the redo methodology, their comprehension increases as they work toward assimilating course content.

“Parents love the redo technology,” the president of Linkonlearning, Janice Frohlich said. “Since this technology gives parents the answers to the questions, they become their child’s learning ally as they discuss content. This kind of parental involvement is beneficial to learning.”

The Linkonlearning K-8 learning management system allows students unlimited opportunities to master unit content through interaction with instruction pages and lessons. Since testing as an integral part of teaching, testing is built into every single Linkonlearning lesson. The rate of retention dramatically increases as students constantly digest material they just heard and examined.

Linkonlearning provides online education and training solutions using Internet-based software and curriculum. Founded as one of North America's first virtual schools, Linkonlearning provides education and training to students around the world. Linkonlearning offers over 10,000 Internet-based lessons for pre-kindergarten to 8th grade, accredited online high school courses, site licences, customized online curriculum, and training and testing to students, schools, institutions, companies and government.
